

Why you're here today

There are two kinds of people here today, and both are equally welcome.

Some of you are here because you want a seat at FlytBase. We're actually hiring - and we've found that jamming with someone on a real problem tells us far more than an interview ever could. If that's you, working on the NestGen track and doing it well is genuinely one of the best ways to show us what you've got.

Some of you are here to learn, build your network, and get inspired. That's just as valid - work on whatever idea excites you.

Either way, **everyone's output gets judged the same way** - on taste, storytelling, and the AI hacks you actually pulled off. Winning or losing isn't really the point. What matters is being honest with yourself about why you're here today, and picking the track that fits that.

What this hackathon is

You've just watched a morning of state-of-the-art AI video creation, and seen the team's own hacks - including the Katputli Factory. Now it's your turn to build something real by 6:00 PM.

You have two options. Read both before you pick.

Option 1 - NestGen (recommended)

Build something that markets **NestGen '26**, FlytBase's global event. This is the recommended path - it's the one being judged most closely, and it comes with a full pack of context, real stories, real speaker names, and images so you're not starting from zero.

If you pick this option: go to the shared Drive folder (link below) and download **NestGen26_Context.md** . That file has everything - what NestGen is, why it matters, real industry stories, confirmed speakers, and a full image bank. Open it in your AI tool of choice and keep working from there - treat it as the living brief you jam on for the rest of the build.

Option 2 - Your own idea

If you've already got an idea for a video, a site, or a skill you want to bring to life today, go with that instead. It doesn't need to be about NestGen at all.

Got an idea but need inspiration? Ask the team or mentors for references to the latest AI-generated videos - use them as a style base, not a script to copy.

What we're judging (applies to both options)

AI models are good enough now that almost anyone can generate something that *looks* aesthetic. That's not the bar anymore. The real question is what you did with it:

- **Storytelling** - does it actually say something, or is it just a pretty generation with nothing behind it?
- **Taste & attention to detail** - the small choices: pacing, timing, what you included and cut, whether it feels considered.
- **Engagement** - would someone actually watch it to the end, or want to keep scrolling your site?
- **The hack** - how clever or unique was your technique or workflow, and how fast did you get to a working result?
- **Fit** - for NestGen: does it make someone want to know more? For your own idea: does it land clearly?

The model will make it look good almost by default. The question we're actually asking is: did you make it good - did you tell a story, did you make a choice, did you make us feel something?

Outputs - pick one

1. **AI video** - short-form, UGC, ultra-realistic, character-driven, animated (Pixar/Ghibli style, etc.), topical/pop-culture parody, or a "factory" - a repeatable pipeline producing a batch of creatives, not just one.
2. **AI landing page with creative scrollytelling effects** - a site that tells its story as you scroll.
3. **Wildcard** - a different format, if you think it tells the story better. Be ready to explain why.

Deliverables

You build ONE final creative output. You submit THREE things: the final output, moodboard, and creative process doc.

- **Final Submission Link:** This is the primary link to your final output, it can be anything AI video, landing page, wildcard
 1. **For video:** public/viewable video link.
 2. **For website:** live deployed URL.
 3. **For wildcard:** publicly accessible link wherever possible.
- **Moodboard Link:** This can be a figma, miro, milanote or any moodboard link
- **Creative Process Doc:** Use our hackathon platform to document your references, prompts, experiments, rejected directions, key decisions, breakthroughs, public links to anything that shaped your process.

Timing

- **Work time:** now until 6:00 PM
- **Use the same hackathon challenge link for your submission.** You'll find all deliverable details on the platform.

Quick links

- 📁 • Reference Drive folder (videos, dashboard images, dock/drone images, and NestGen26_Context.md - **only needed if you picked Option 1**): https://drive.google.com/drive/folders/1qVkyDsx_lqPdu38_f8WECVApXgUrzp7i
- **Katputli Factory:** Access details will be shared by the team.
